Outdoor sale?
No problem.

mobile smartprinter

SMARTPRINTER allows to place orders or make actual sale at the customer directly.

How it works?

SMARTPRINTER is a mobile device which is based on certified fiscal printer with Bluetooth communication.

All sales are made through **PegasPosMobile** application which is based on Android - by your mobile phone for example.

- prolonged work on batteries

- wirelessly and remotely operable

- inbuilt standard interfaces for communication: Bluetooth, WiFi, 3G/GPRS, RFID/NFC, USB, etc.

- naturally uses and supports features of mobile data networks

  SMARTPRINTER follows current trends in mobility.

You can choose from these modes of PegasPosMobile:

1. **Mobile sale**
2. **Order terminal**
3. **Cash register**
   (retail and restaurant mode)

Connection:

- **Bluetooth, serial, USB to PC, SmartPhone, tablet** (printer control through the program...)
- **WiFi, 3G/GPRS** (printer control through the internet...)
- **Bluetooth for connection with HID devices** (barcode reader, keyboard, external display...)
- **NFC communication** - for loyalty systems based on SmartPhone, with technical solution for contactless payments
- **microSD memory cards for electronic journal and PLU database**

---

1. Mobile sale

It provides functions which allow automation of mobile sale process.
PegasPosMobile application can be feed by orders from customers.
Salesman can make at the customer directly:

- **modification of orders**

- **new orders**

- **realization of sale with fiscal bill or packing list**

All transactions are recorded in the application for subsequent transmission to superior ECR information system.

2. Order terminal

It cooperates with superior restaurant software, automates processes in restaurants and allows to waiters:

- **movement on the terraces and placing orders which are printed in a bar or kitchen subsequently**

- **creation of bills for customers at the table by certified fiscal printer**

3. Cash register

It provides complete functionality of retail or restaurant POS cash register:

- **one man operation**
  In a case of simple operation it is ready to work in "STAND ALONE" mode with no need of other application or HW

- **more people operation**
  In a case of difficult operation with need of warehousing it can be used a synchronization server there
